

'A LINE IN THE SAND' – GLOBAL COMMITMENT TO ELIMINATE PLASTIC POLLUTION AT THE SOURCE

A Global Commitment to eradicate plastic waste and pollution at the source has been signed by 250 organisations including many of the world's largest packaging producers, brands, retailers and recyclers, as well as governments and NGOs.

The New Plastics Economy Global Commitment is led by the Ellen MacArthur Foundation, in collaboration with UN Environment, and will be officially unveiled at the Our Ocean Conference in Bali today (Monday, Oct 29).

Signatories include companies representing 20% of all plastic packaging produced globally. They include well-known consumer businesses such as Danone; H&M group; L'Oréal; Mars, Incorporated; PepsiCo; The Coca-Cola Company; and Unilever; major packaging producers such as Amcor, plastics producers including Novamont, and resource management specialist Veolia.

The Global Commitment and its vision for a circular economy for plastic are supported by the World Wide Fund for Nature (WWF), and have been endorsed by the World Economic Forum, The Consumer Goods Forum (a CEO-led organisation representing some 400 retailers and manufacturers from 70 countries), and 40 universities, institutions and academics. More than fifteen financial institutions with in excess of \$2.5 trillion in assets under management have also endorsed the Global Commitment and over \$200 million has been pledged by five venture capital funds to create a circular economy for plastic.

The Global Commitment aims to create 'a new normal' for plastic packaging. Targets will be reviewed every 18 months, and become increasingly ambitious over the coming years. Businesses that sign the commitment will publish annual data on their progress to help drive momentum and ensure transparency.

Targets include:

- **Eliminate** problematic or unnecessary plastic packaging and move from single-use to reuse packaging models
- **Innovate** to ensure 100% of plastic packaging can be easily and safely reused, recycled, or composted by 2025
- **Circulate** the plastic produced, by significantly increasing the amounts of plastics reused or recycled and made into new packaging or products

Eliminating unnecessary and problematic plastics is an essential part of the Global Commitment vision, and will make it easier to keep remaining plastics in the economy and out of the environment.

Dame Ellen MacArthur, Founder of the Ellen MacArthur Foundation, said:

“We know that cleaning up plastics from our beaches and oceans is vital, but this does not stop the tide of plastic entering the oceans each year. We need to move upstream to the source of the flow. The New Plastics Economy Global Commitment draws a line in the sand, with businesses, governments and others around the world uniting behind a clear vision for what we need to create a circular economy for plastic. This is just one step on what will be a challenging journey, but one which can lead to huge benefits for society, the economy and the environment. I encourage all businesses and governments to go further and embark on a race to the top in the creation of a circular economy for plastic. One in which this material never becomes waste or pollution.”

Pavan Sukhdev, President of WWF International, said:

“The plastics crisis can only be solved with the combined efforts of all key players in the system. The World Wide Fund for Nature (WWF)’s strategy in plastics is to advocate, amplify and accelerate a connected suite of initiatives for change; therefore we are working closely with other key organizations, such as the Ellen MacArthur Foundation, to convey a joint message on our ambitious joint commitments, and to develop the tools needed to achieve these in partnership with companies, civil society, governments and citizens. WWF therefore endorses the The New Plastics Economy Global Commitment as we consider it an important step forward to join the efforts of businesses and governments around the world towards system-wide solutions.”

UN Environment, which leads the Global Partnership on Marine Litter and its Clean Seas Campaign, last month also launched the Global Plastics Platform to support international efforts to tackle plastic pollution. It said it would use its convening power to drive engagement with the Global Commitment from governments and other key players.

Governments that sign, pledge to put in place policies and enabling conditions to support the Global Commitment’s targets and vision. **Executive Director Erik Solheim said:** “Ocean plastic is one of the most visible and disturbing examples of a plastic pollution crisis. The New Plastics Economy Global Commitment is the most ambitious set of targets we have seen yet in the fight to beat plastics pollution. It sets out the steps businesses and governments must take if we are to find a solution to the root causes of plastic pollution and we urge all those working towards dealing with this global issue to sign it.”

NOTES TO EDITOR

KEY STATISTICS

Researchers estimate that more than 8.3 billion tonnes of plastic has been produced since the early 1950s. About 60% of that plastic has ended up in either a landfill or the natural environment. More than 99% of plastics are produced from chemicals derived from oil, natural gas and coal – all of which are non-renewable resources. If current trends continue, by 2050 the plastic industry could account for 20% of the world's total oil consumption.

If current trends continue, there could be more plastic than fish in the ocean by 2050.

Plastic packaging is not the sole source of plastic pollution, however it is the biggest application of plastic, with about one third of all plastic produced going into packaging.

THE NEW PLASTICS ECONOMY GLOBAL COMMITMENT VISION

At the heart of the Global Commitment is a vision of a circular economy for plastic, where plastics never become waste. Each signatory formally endorses the vision and the need to work towards achieving it.

It is defined by six key points:

- Elimination of problematic or unnecessary plastic packaging through redesign, innovation, and new delivery models is a priority
- Reuse models are applied where relevant, reducing the need for single-use packaging
- All plastic packaging is 100% reusable, recyclable, or compostable
- All plastic packaging is reused, recycled, or composted in practice
- The use of plastic is fully decoupled from the consumption of finite resources
- All plastic packaging is free of hazardous chemicals, and the health, safety, and rights of all people involved are respected

THE ELLEN MACARTHUR FOUNDATION

The Ellen MacArthur Foundation was launched in 2010 to accelerate the transition to a circular economy. The Foundation works across key areas including insight and analysis, business and government, learning, systemic initiatives and communications.

With its Knowledge Partners (Arup, IDEO, McKinsey & Company and SYSTEMIQ), the Foundation works

to quantify the economic opportunity of a more circular model and to develop approaches for capturing its value. The Foundation collaborates with its Global Partners (Danone, Google, H&M, Intesa Sanpaolo, NIKE Inc., Philips, Renault, Solvay, Unilever), Core Philanthropic Funders (SUN, MAVA, players of People's Postcode Lottery (GB)) and its CE100 network (businesses, universities, emerging innovators, governments, cities, affiliate organisations), to build capacity, explore collaboration opportunities and to develop circular business initiatives.

THE NEW PLASTICS ECONOMY

Over the past four years, the Ellen MacArthur Foundation's New Plastics Economy initiative has rallied businesses and governments behind a positive vision of a circular economy for plastics. Its 2016 and 2017 New Plastics Economy reports captured worldwide headlines, revealing the financial and environmental costs of waste plastic and pollution. In the last year it has brought together 15 leading companies committed to work towards 100% reusable, recyclable, or compostable plastic packaging by 2025. The Global Commitment takes this work to the next level – creating a global coalition of leaders with the power to prevent plastic pollution at the source.

The initiative is supported by Wendy Schmidt as Lead Philanthropic Partner, the Global Environment Facility (GEF), MAVA Foundation, Oak Foundation, and players of People's Postcode Lottery (GB) as Philanthropic Funders. Amcor, The Coca-Cola Company, Danone, L'Oréal, MARS, Novamont, PepsiCo, Unilever, and Veolia are the initiative's Core Partners.

UN ENVIRONMENT

UN Environment is the leading global voice on the global environment. It provides leadership and encourages partnership in caring for the environment by inspiring, informing, and enabling nations and peoples to improve their quality of life without compromising that of future generations. UN Environment works with governments, the private sector, civil society and with other UN entities and international organizations across the world.

ENDORSEMENT QUOTES

“With more than 250 businesses, policy makers, NGOs and others signing on to the Global Commitment to eliminate plastic pollution at the source, we are reaching critical mass in our effort to create a circular economy around plastics. While there is much work ahead of us to continue this global effort, and halt the flow of plastics in our oceans, I’m optimistic that we are now moving in a positive and sustainable direction.” - **Wendy Schmidt, President, The Schmidt Family Foundation and Co-Founder, Schmidt Ocean Institute**

“Transition to more circular use of plastics is essential to help reduce the accumulation of end of life plastic as waste and litter. The New Plastics Economy Global Commitment represents a major step forward in this journey; I am pleased to endorse it.” - **Prof. Richard Thompson, University of Plymouth**

“Plastic waste and pollution is a big global environmental challenge. At H&M group we are committed to take the actions needed to shift the system towards a circular use of plastic packaging where it never ends up as waste. But there is no single brand that can tackle this industry-wide challenge on its own. We must act as one voice and the New Plastics Economy Global Commitment is a big step in the right direction, as it will align business and governments on a common agenda and timeframe. Signing this global commitment is also another important step in our journey to become 100% circular and renewable in our business,” - **Cecilia Brännsten, Environmental Sustainability Manager for H&M group**

“For a Group like Veolia, a resource management pioneer, it is imperative that all stakeholders come together to find new innovative solutions to stop plastic pollution in its tracks and at its source. Working together is the only option to create a strong global industrial circular plastics system. In this way, we can offer both an alternative to virgin materials and a world without plastic pollution.” - **Antoine Frérot, Chairman & CEO of Veolia**

“As the Board of The Consumer Goods Forum, we recognise the pressing need for our industry to play a leading role in tackling the issue of plastic waste at its root cause and endorse the Ellen MacArthur Foundation’s New Plastics Economy Global Commitment and its vision of a circular economy where no plastic ends up as waste.” - **The Board of The Consumer Goods Forum**

“By endorsing the Ellen MacArthur Foundation’s Global Commitment the EIB expresses its support for accelerating the transition to a circular economy for plastics, where we keep plastic in the economy and out of the environment. As the largest multilateral lender, we will encourage our partners to develop solutions to reduce plastic waste generation and increase the levels of plastic reuse and recycling.” - **Jonathan Taylor, Vice-President, European Investment Bank (EIB)**

“The New Plastics Economy Global Commitment is an important step on our journey to eliminate plastic waste. It’s critical that all the key actors in the system work together to accelerate our transition towards the circular economy and, as part of that, address the challenge of single-use plastics. Unilever is ready to play its part and calls on leading businesses and governments to join the movement.” - **Paul Polman, CEO of Unilever**

“We believe the time is now to step up and work with others to drive a radical shift that will help free the world from packaging waste. Danone fully supports the New Plastics Economy Global Commitment as we believe it will play a critical role in aligning governments, industries, civil society and finance around a set of common ambitions and objectives”. - **Emmanuel Faber, Chairman and Chief Executive Officer of Danone**

“I am proud that today we have signed up to the New Plastics Economy Global Commitment. Plastic waste is one of the greatest environmental challenges facing the world. It is a global problem requiring a global solution. That’s why the UK Government has brought together the Commonwealth Clean Oceans Alliance and Global Plastics Action Partnership. It’s also why I want to congratulate the Ellen MacArthur Foundation on their excellent work to help galvanise action. Only by unifying countries and businesses all over the world we will be able to safeguard our land, rivers and seas for future generations.” - **Michael Gove, UK Secretary of State for the Environment**

ENDORSEMENT QUOTES

“Scotland has shown leadership in how we use resources, increasing our recycling and reducing waste because we understand that we cannot continue to ignore the impact we are having on the natural world. I am proud that Scotland has recognised the important contribution of the circular economy to sustainable and inclusive economic growth and by signing up to the New Plastics Economy Global Commitment we want to encourage leading nations and businesses to do the same.” - **Roseanna Cunningham, Cabinet Secretary for the Environment and Climate Change for Scotland**

“Plastic waste and pollution is one of the most pressing environmental concerns of our age. At Burberry, we are committed to transforming how we use plastic in our supply chain. We are immensely proud to make this commitment and urge all businesses to consider how they can do the same.” - **Marco Gobbetti, Chief Executive Officer, Burberry plc**

“The challenge of plastic waste is real and urgent, and best addressed through specific actions that CGF companies can take individually and collectively in partnership with governments, NGOs and the recycling industry. We're committed to doing our part to ensure the plastic we need is safely and economically, reused, recycled or composted.” - **Ian Cook, Co-Chair of the Consumer Goods Forum**
